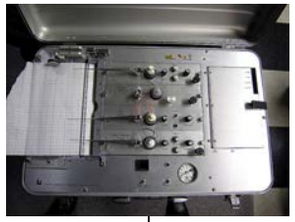
The 100+ Year Evolution of Credibility Assessment Technology



1921

John Augustus Larson, both a medical student at the University of California at Berkeley and a police officer of the Berkeley Police Department in Berkeley, California, invents the first modern-day polygraph.

University of Utah scientists and internationally reknown polygraph experts, John C. Kircher and David C. Raskin, computerize the polygraph.

1991

2002

John Kircher and Doug Hacker conceive of the concept of detecting lies from a person's eyes. They and a team of scientists begin researching this idea. In 2006, a published dissertation documents the first laboratory study that demonstrates it's possible.

Converus announces the worldwide release of EyeDetect — the world's first ocular-motor detection test that assesses credibility by measuring involuntary eye behavior.

2014

2019

Converus releases the EyeDetect Multi-issue Comparison Test (MCT) Protocol. MCT scores up to four relevant issues in a single test and also accurately identifies the issue that caused the candidate to fail the test.

Converus releases an audio-based test called the EyeDetect Audio MCT for those that cannot read.

Converus releases EyeDetect+ 1.0, which measures ocular data as well as physiological data similar to polygraph.

2020

2021

100 years after the invention of the first modern-day polygraph, Converus announces the release of EyeDetect+, the world's first automated polygraph.

VerifEye, the first mobile app for accurately verifying truth, is released. Based on the same EyeDetect technology, this 10-minute test now makes a truth verification test available to the masses.
